## ABOUT ME

Passionate about programming and web development, I am currently a student specializing in Software engineering. My education has allowed me to gain expertise in the dynamic world of web development, and I am motivated to actively contribute to innovative projects in this field.

---

## TECHNICAL SKILLS

### Programming Languages

- Python
- Java
- HTML/CSS
- JavaScript
- C/C#
- PHP

### Tools and Technologies

- Version Control: Git
- Databases: SQL, MySQL, MongoDB

### Frameworks

- React

### System Administration

- Operating Systems: Windows, Linux

### Software Design and Architecture

- UML (Unified Modeling Language)

### Game Development

- Unity

---

## PROFESSIONAL EXPERIENCE

### Academic Projects :

[2024]

#### Budget Organizer

A web project for the second-year final study using React.js and MongoDB. This project involved developing an application that allows users to manage their personal budgets, with features such as adding transactions, viewing expenses, and managing expense categories.

#### Music App with Spotify API

[2024]

A project utilizing the Spotify API and React.js to create a music application. This app allows users to search for songs, create playlists, and access their Spotify account features directly through the application.
